

One solution to authentication

```
options["userID"]=sessionStorage.getItem("userID");  
options["course_password"]=sessionStorage.getItem("course_password");
```

```
<iframe width="800" height="400"  
src="https://demo.webwork.rochester.edu/webwork2/UR102/Demo/5?  
    &effectiveUser=options["userID"]&  
    &user=options["userID"]&  
    &passwd=options["course_password"]&  
    &templateName=simple">  
</iframe>
```

- Use “sessionStorage” (a facility like cookies)
 - Not incredibly secure (particularly if you forget to log out) but about the same amount of risk as using cookies.
 - Example `embed_VWV_summative_problems.html`

Code to produce the three summative problems

```
<h1>Summative code snippet</h1>
```

```
<li>
```

```
<div class="clickme">
```

```
    Show/hide: CAPA physics problem 6
```

```
</div>
```

```
<div class="wwproblem">
```

```
    <button class="webwork-iframe" data-set_id="Demo" data-problem_number="6">  
        do problem
```

```
    </button>
```

```
    <div></div>
```

```
</div>
```

```
</li>
```
